

The AZOGCC has statutory responsibility to regulate the drilling for and production of oil, gas, h

The AZOGCC consists of the Governor, the State Engineer, the State Land Commissioner, the State

Featured Publications: Arizona Has Helium

The current posted price of \$64.75 per Mcf in-kind and \$75.00 per Mcf open market has increased interest in the hunt for helium. Some of the richest helium-bearing gas in the world was produced in Arizona. Helium concentrations range from trace amounts up to ten percent in the Holbrook Basin and Four Corners. Both areas have good potential for additional discovery and production of helium. This potential was the focus of the Arizona Geology published in winter 2003. [Download Here](#)

Also: Want to Drill an Oil Well?

This issue of Arizona Geology notes areas with best potential and describes the process of exploring and drilling for oil and gas in Arizona. [Download Here](#)

Also: Is Carbon Sequestration in Arizona's Future?

This issue of Arizona Geology describes potential geologic carbon-sequestration sites in Arizona. The West Coast Carbon Sequestration Partnership (WESTCARB) and Arizona Public Service (APS) tested one of the sites in 2009 (see announcements below). [Download Here](#)
